Walking House

The Walking House project explores the concept of mobile architecture—structures that challenge the traditional idea of permanence and stability. Inspired by the visionary works of Archigram, the design envisions a living, adaptable organism capable of movement, gathering, and transformation.

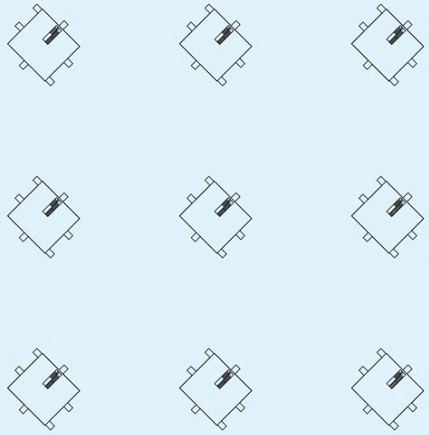
Each unit is equipped with mechanical “robo-legs,” enabling it to travel independently while remaining able to connect with other modules through a system of docking joints. This flexibility allows the formation of temporary communities that can assemble, disperse, and reconfigure according to changing needs and environments.

The project responds to contemporary conditions of migration and displacement, proposing mobility as both a social and spatial solution. It reimagines architecture as a responsive, collective infrastructure—part machine, part home—supporting new forms of belonging and community in constant motion.

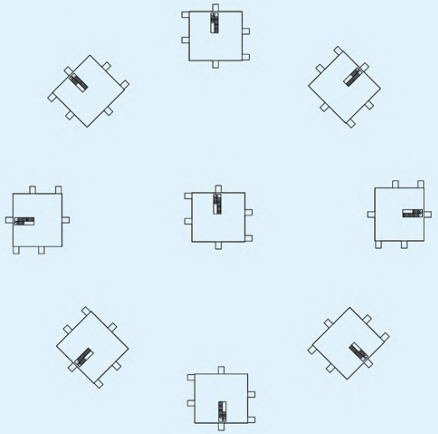
Urban Structures

Communities of walking houses reflect their social order: democratic groups form open grids, emphasizing equality, while authoritarian ones arrange in circles around a central house, expressing control and hierarchy.

DEMOCRACY

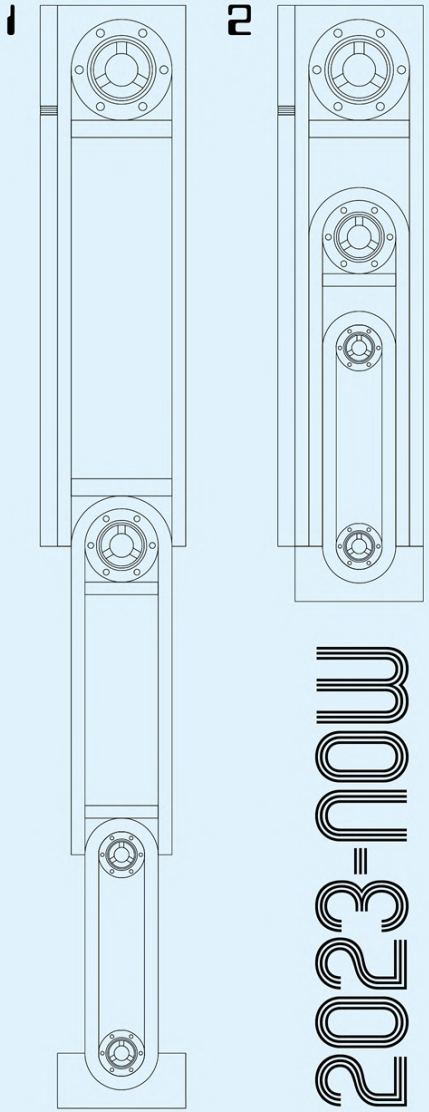


AUTHOCRACY



Robo-legs

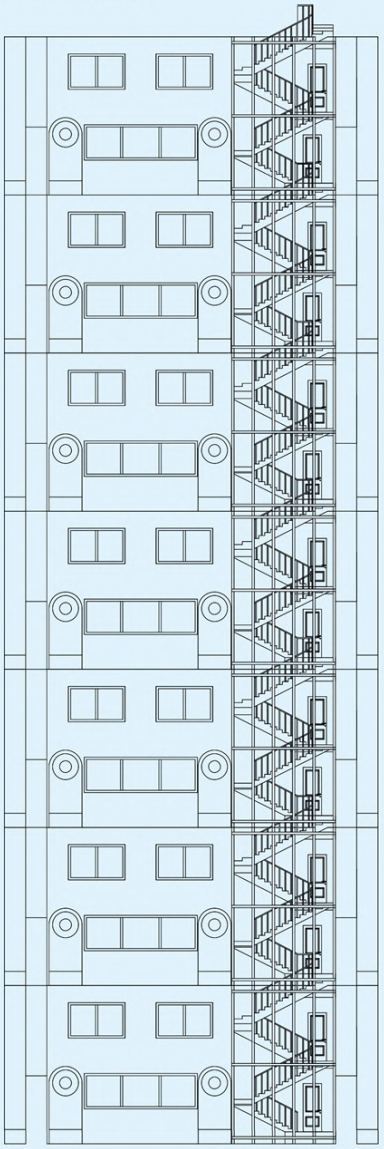
The robotic legs fold and unfold using hydraulic pressure and glide smoothly on bearings, enabling stable, efficient movement across terrain. They allow houses to walk while carrying the structure’s weight.



2023-now

TOWER

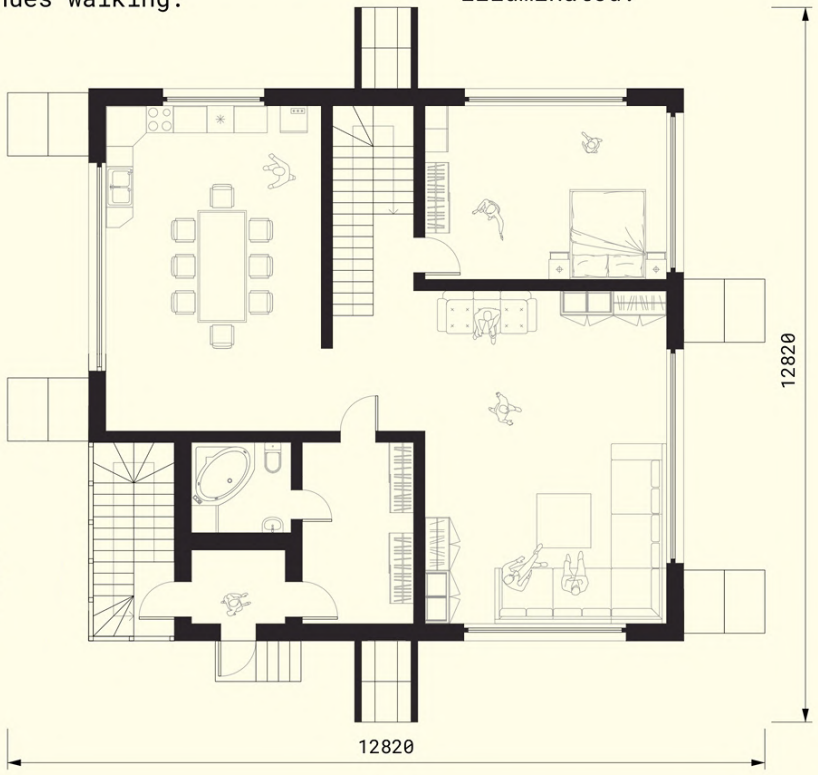
Walking houses can assemble into vertical structures, using their robotic legs to form temporary skyscrapers. By stacking and reconfiguring themselves, they adapt their community layout to dense urban environments.



THE FIRST FLOOR

The first floor acts as a social nucleus, hosting meals, meetings, and guests. Its robotic foundation stabilizes gatherings, ensuring warmth, communication, and shared experiences even as the home continues walking.

Robotic legs are integrated with the architectural plan, carefully positioned so windows remain unobstructed. Their synchronized motion ensures walking occurs externally, keeping the inner domestic environment naturally illuminated.



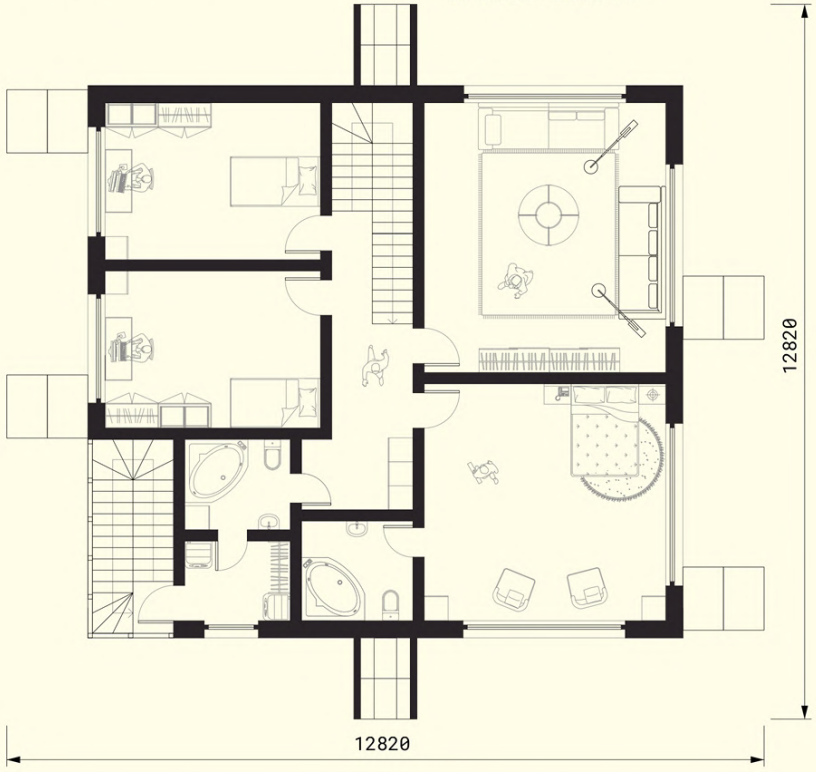
The ground floor entrance links to an external staircase attached to the robotic frame, leading upward to the second floor and roof, allowing movement between connected walking houses when units dock together.

The kitchen and living area form one open, adaptive space. In a robotic home, this design supports shared energy use, automated cooking systems, and dynamic communication among neighboring mobile dwellings.

The Second Floor

The second floor, reserved for residents, includes working pods, a private family lounge, and parental quarters—spaces designed for reflection and rest within the gentle mechanical rhythm of a moving structure.

Two floors serve as observatory levels, offering panoramic views while in motion. Smart glass panels adjust transparency, creating a tranquil workspace and retreat suspended within the steady rhythm of walking architecture.



When walking houses dock, all sewage, heating, and water systems interlink automatically, forming a collective metabolic network that circulates resources efficiently, sustaining the entire mobile community during migration or stationary phases.

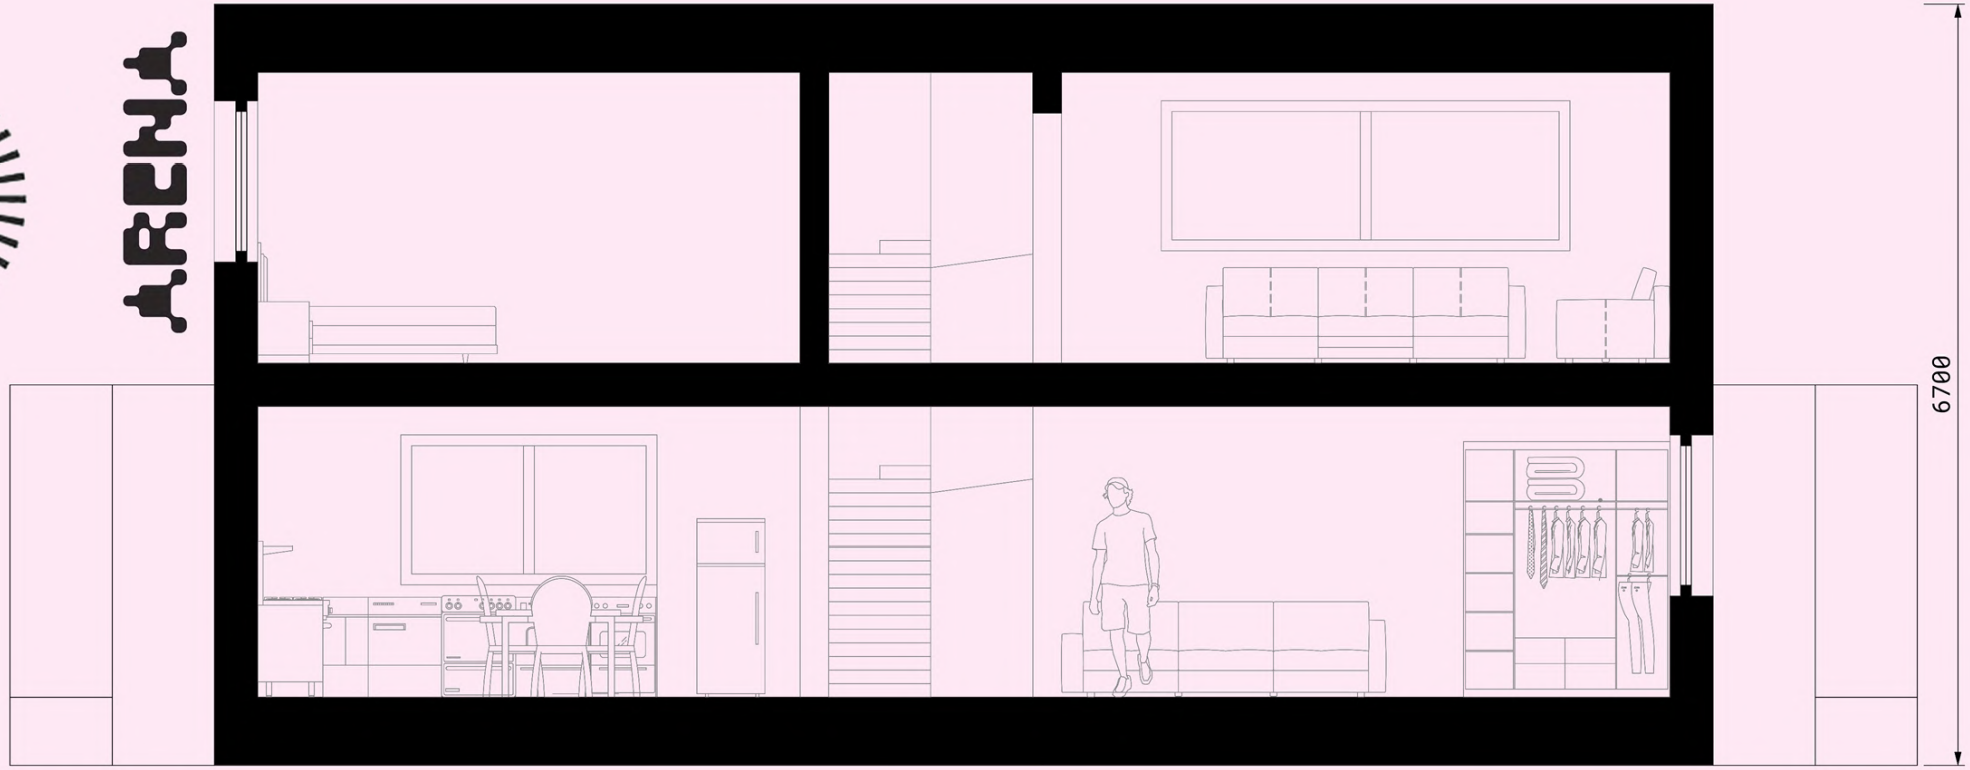
During movement, robotic stabilization systems keep all floors perfectly parallel to the ground. Advanced sensors and adaptive legs balance every step, ensuring continuous equilibrium and safety for inhabitants inside.

4 Life inside the house

Each Walking House is a two-story robotic habitat built for mobility and independence. The lower level holds mechanical systems, batteries, and storage; the upper provides living areas with flexible layouts and views. AI navigation ensures sustainable and intelligent travel. Blending robotics with architecture it creates a self-sufficient, adaptive dwelling—part creature, part home—capable of walking and adjusting to changing environments and needs.

The Walking House's AI assists nomadic groups in shaping their political order. It gathers opinions, manages resources, and supports fair decisions, enabling democratic collaboration. Yet it can also centralize control, optimizing leadership and coordination. This duality lets mobile communities test both democratic and authoritarian systems, reflecting how architecture and technology together influence evolving social and political relationships.

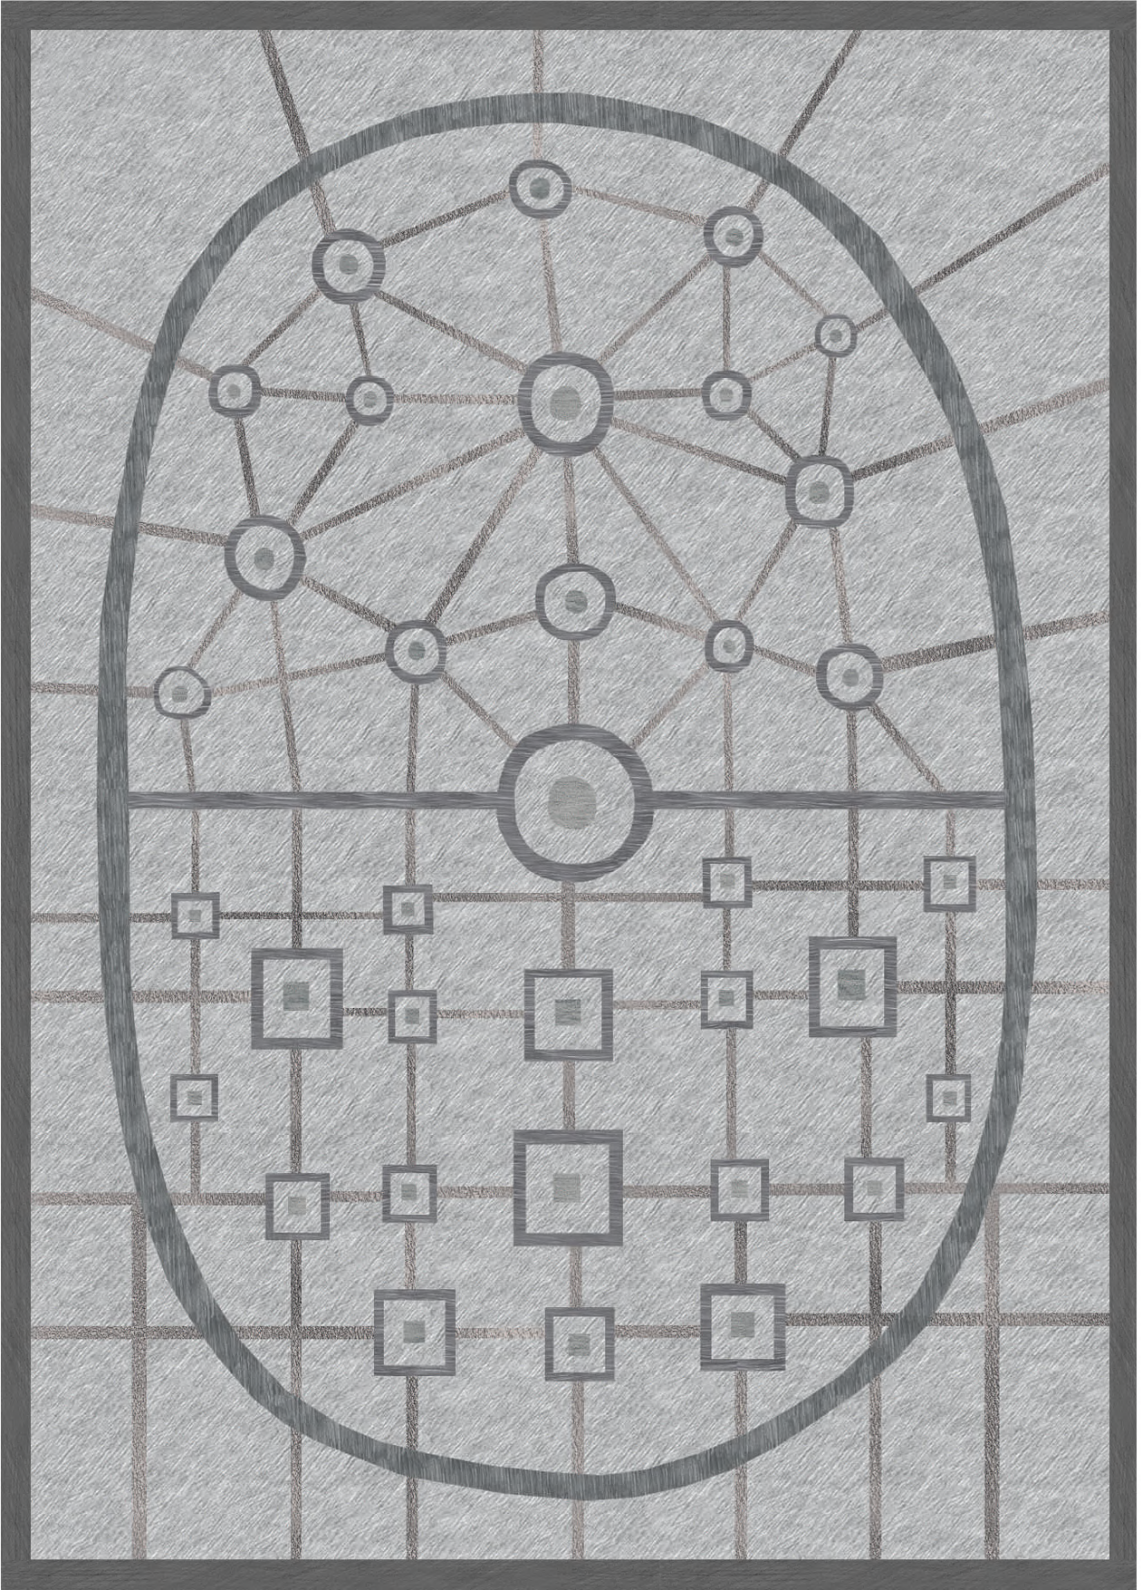
ARENA



3-DAY STAY

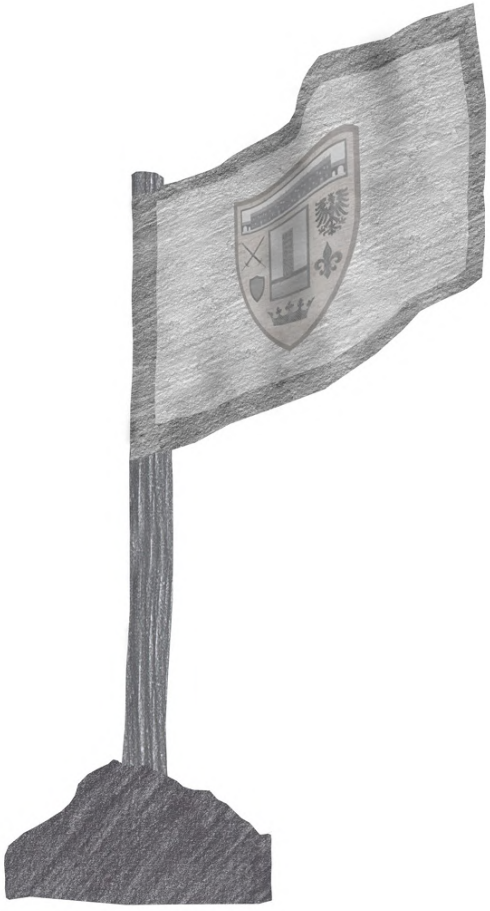
The Walking House unites humans and artificial intelligence in a dynamic living system. Each home's AI learns from residents, adjusting walking speed, energy use, temperature, and direction. It adapts to environmental changes and social needs, forming traveling communities that move and reorganize together. This harmony between human life and machine intelligence redefines home as a flexible, responsive organism in constant motion.

All houses combine robotics and human warmth. Despite its mechanical legs and sensors, the interior offers comfort and familiarity. Adaptive lighting, soft textures, and intelligent climate control create emotional balance. Residents experience movement without losing the essence of home. Technology here serves humanity, proving that even in mechanical architecture, the feeling of belonging and peace can thrive.

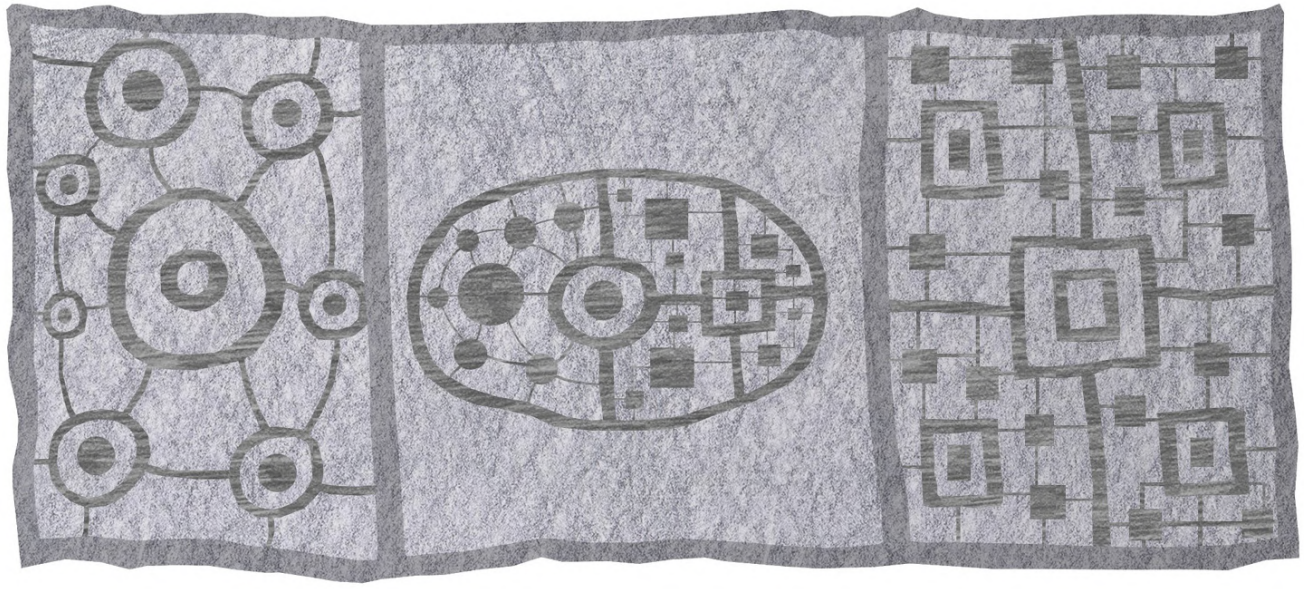


The World Center Saga

Once, amid the endless wars between humanity's factions, a king emerged who, through the power of his words, intellect, courage, and valor, united the two most bitter enemy peoples. He forged the first confederate state of "Duoterra," encircled it with walls, and erected a central tower as his seat of rule – dubbed the "Center of the World." Yet he astutely divided the new realm into two halves to preserve the political and cultural autonomy of each side. The king became a symbol of victory and peace, akin to King Arthur himself.



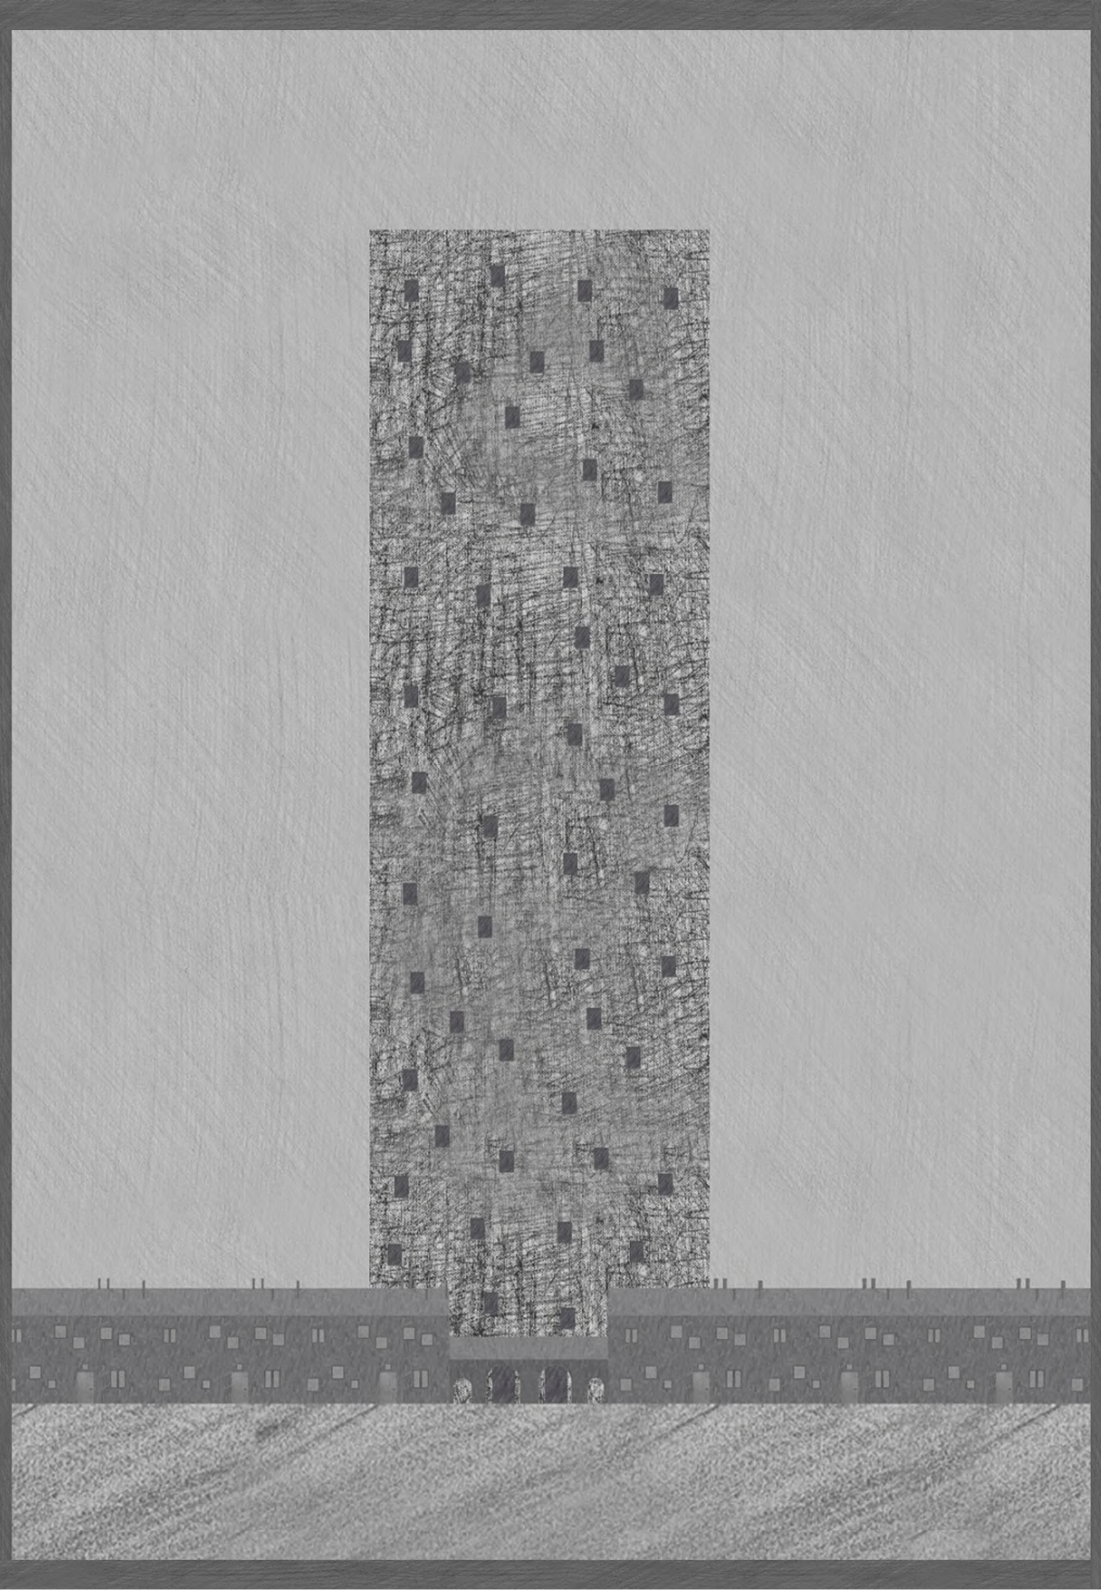
The Center Of The World



Masterplan

On the state organizational plan of "Duoterra," personally endorsed by the king, one discerns a clear distinction in the territorial structure of its two contrasting halves forming a unified whole. The left portion features a somewhat chaotic arrangement of cities and villages radiating from its center, where development hinges on proximity to the capital: the nearer to the heart, the more prosperous the populace, with elevated economic vitality and cultural refinement.

The right portion, by contrast, is predominantly organized into rectangles, with everything meticulously calculated and pragmatically positioned to maximize the efficiency of societal, economic, and cultural development. Each district in this half specializes in a particular type of production or agriculture, ensuring minimal disparity between center and periphery in terms of population prosperity and cultural advancement.



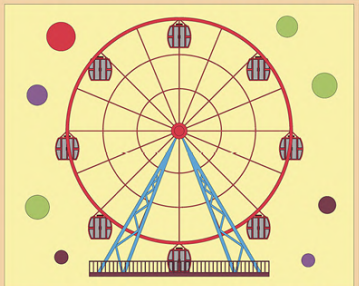
Inspired By Coney Island In New York, Many Other Amusement Parks And Theaters

GREETINGS FROM

THE THEATER QUARTER

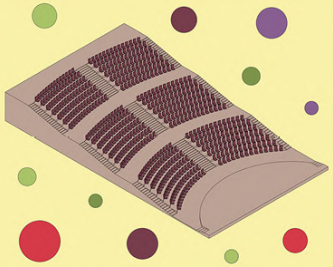
V.V.

THIS POSTCARD IN THE THEATER-QUARTER CAN BE BOUGHT BY EACH VISITOR FOR 3 DOLLARS OR NEARLY 250 RUBLES. IT WILL REMIND RESIDENTS OF THEIR BEAUTIFUL HOME AND VISITORS OF GOOD TIME SPENT IN THE THEATER-QUARTER.



A FERRIS WHEEL IS A CONCEPTUAL PROTOTYPE OF AN AMUSEMENT PARK

A CIRCUS TENT IS A CONCEPTUAL PROTOTYPE OF THE MEMBRANE ROOFS OF THE HOUSES



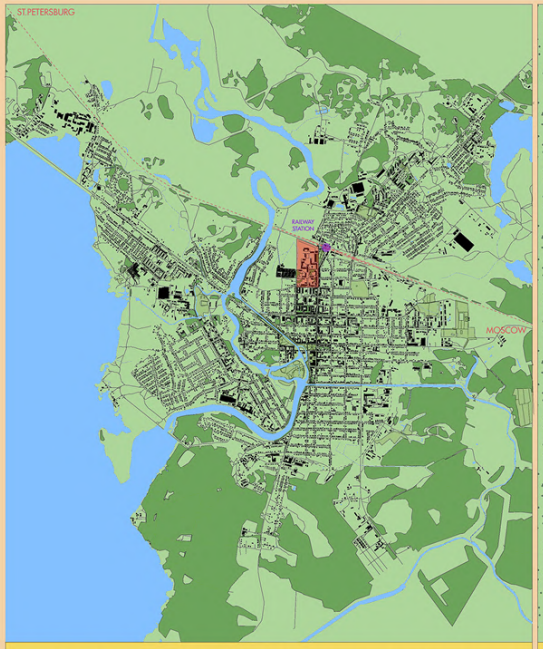
AN AXONOMETRY OF AN INTERIOR OF A THEATER IS A CONCEPTUAL PROTOTYPE OF THE BALCONIES

THE THEATER-QUARTER CONSISTS OF SEVERAL RESIDENTIAL BUILDINGS AND ONE PUBLIC BUILDING THAT FORM A CENTRAL SQUARE. THE ATMOSPHERE OF THE QUARTER IS VERY REMINISCENT OF THE AMERICAN AMUSEMENT PARK CONEY ISLAND IN BROOKLYN. EACH HOUSE HAS BOTH RESIDENTIAL AND PUBLIC AREAS-BALCONIES ON THE SIDE OF THE MAIN FACADE THAT LOOK OUT ONTO THE SQUARE AND RESEMBLE SPECTATOR SEATS IN A THEATER. THESE AREAS ARE SEPARATED FROM EACH OTHER IN SUCH A WAY THAT RESIDENTS AND TOURISTS DO NOT INTERFERE WITH EACH OTHER, ESPECIALLY DURING VARIOUS EVENTS, OCCASIONS OR EXHIBITIONS. THERE ARE CONNECTIONS-CORRIDORS BETWEEN THE HOUSES, ALONG WHICH YOU CAN MOVE BETWEEN THE FLOORS OF NEIGHBORING HOUSES. ON ALL FLOORS OF THE DOME HOUSE THERE ARE VARIOUS WORKSHOPS AND CLASSES FOR HOLDING WORKSHOPS AND MASTER CLASSES. THE ROOFS OF THE RESIDENTIAL BUILDINGS ARE TENT STRUCTURES AND THEIR STRUCTURE RESEMBLES TRAVELING CIRCUS TENTS.

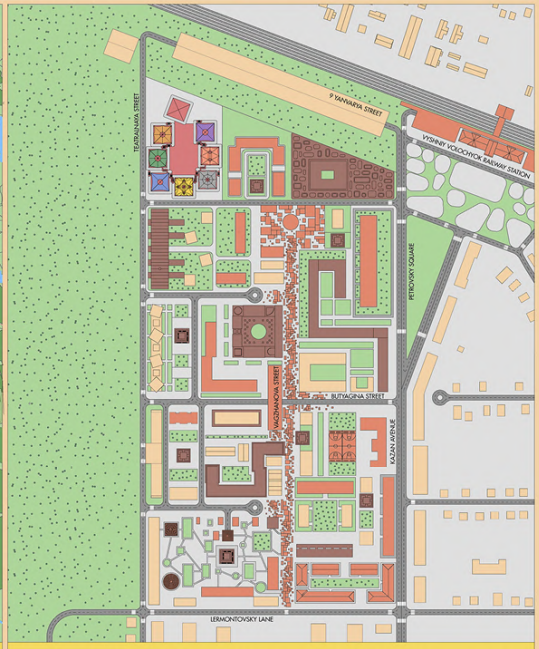
THE CONCEPTUAL SOLUTION FOR THE THEATER-QUARTER IS DESCRIBED HERE. THE FOLLOWING PAGES WILL CONTAIN ALL THE NECESSARY DRAWINGS AND PLANS THAT GRAPHICALLY CONVEY THE IDEA OF THE PROJECT.

THE MAIN CONCEPTUAL SCHEMES OF THE THEATER-QUARTER IN VYSHNIY VOLOCHYOK

The Structure Of The Theater-Quarter Combines Concepts Of An Amusement Park And A Theater



URBAN PLAN OF VYSHNIY VOLOCHYOK, TVER REGION, RUSSIA



PLAN OF THE DISTRICT IN VYSHNIY VOLOCHYOK WITH THE THEATER-QUARTER

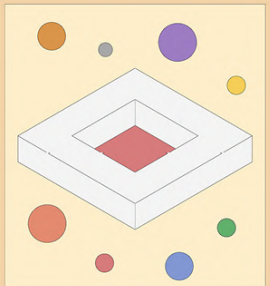
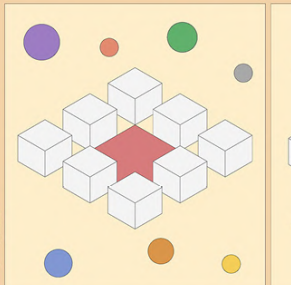
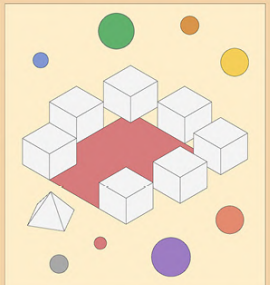
STEP 1: HOUSES AND CENTRAL SQUARE



STEP 2: MERGING OF THE HOUSES



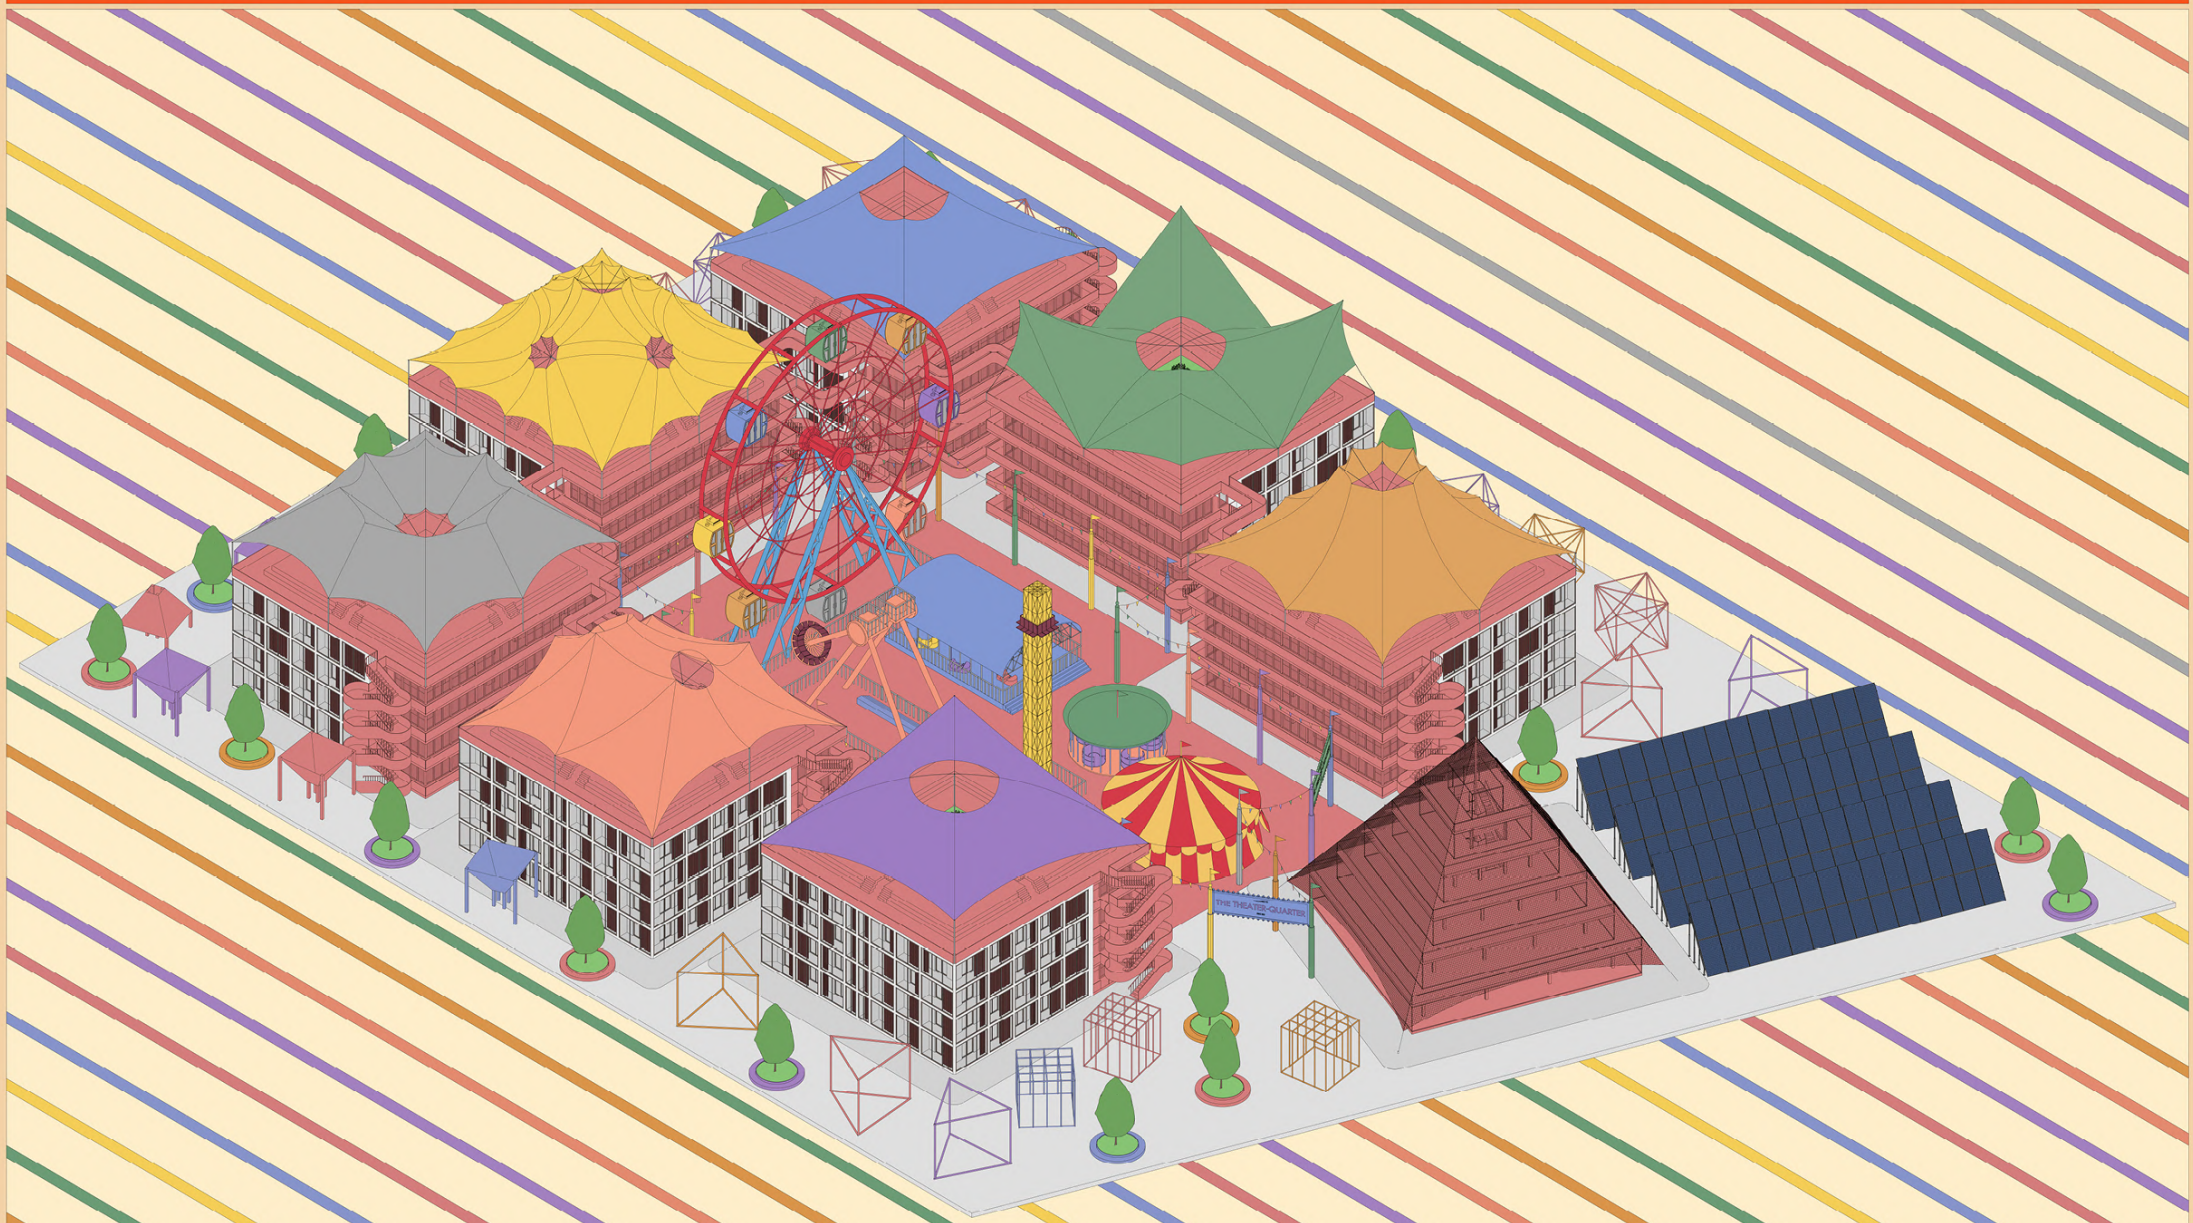
STEP 3: FRAGMENTATION OF THE HOUSES



STEP 3: SEPARATION OF THE HOUSE

SCHEMES OF THE LOCATION AND FORMATION OF THE THEATER-QUARTER

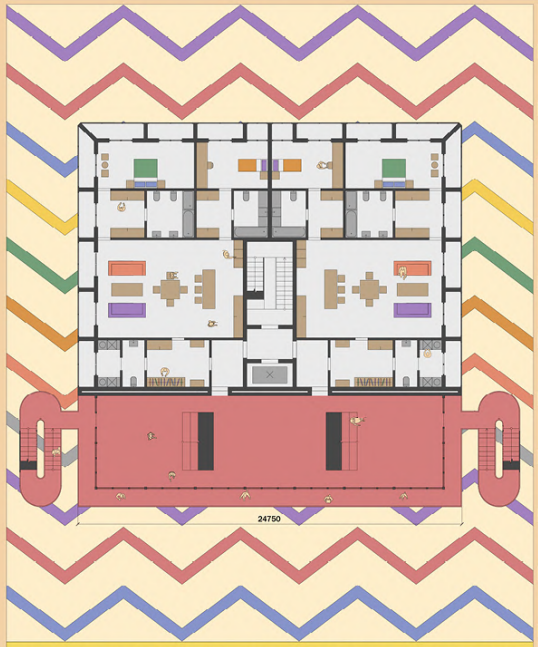
Technical Drawing Of An Axonometric View Reveals Diversity Of The Theater-Quarter Which Is Based On Different Attractions Like A Ferris Wheel And A Circus Tent



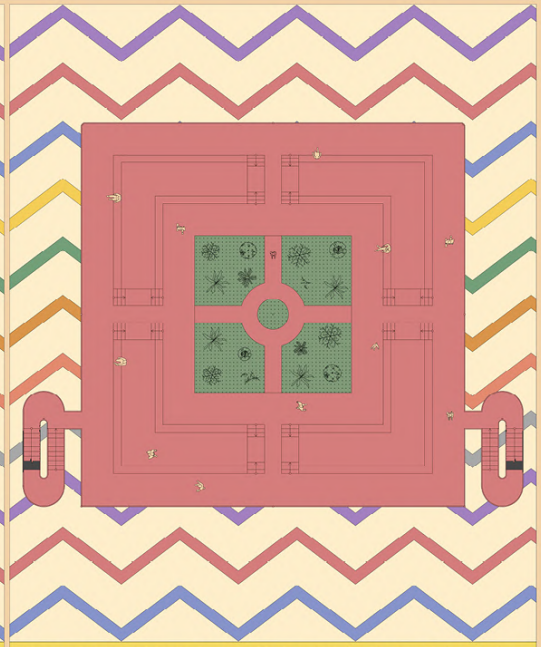
THE THEATER-QUARTER IS A UNIQUE SYSTEM THAT BRINGS TOGETHER NINE RESIDENTIAL BUILDINGS AND A VIBRANT AMUSEMENT PARK WITH A VARIETY OF ATTRACTIONS. RESIDENTS AND VISITORS CAN ENJOY THE PARK BY WALKING INSIDE AND EXPERIENCING THE RIDES, OR THEY CAN SIMPLY WATCH THE LIVELY ATMOSPHERE AND ACTIVITIES ON THE SQUARE FROM THEIR BALCONIES. THESE BALCONIES ARE DESIGNED TO RESEMBLE THEATER SEATS, GIVING PEOPLE A PERFECT VIEW OF THE ATTRACTIONS AND MAKING THEM FEEL LIKE PART OF A GRAND PERFORMANCE. THIS SPECIAL COMBINATION CREATES A LIVELY AND ENTERTAINING ENVIRONMENT FOR EVERYONE.

AXONOMETRIC VIEW OF THE ENTIRE THEATER-QUARTER WHICH SHOWS LAYOUT OF THE CENTRAL SQUARE AND ARRANGEMENT OF THE HOUSES RELATIVELY TO EACH OTHER

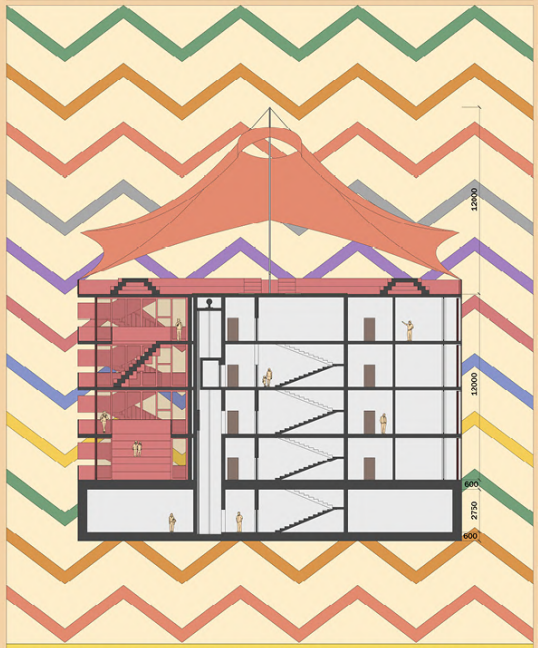
Technical Drawings Show Various Structural Features Of The Residential Building



PLAN OF THE HOUSE SHOWS THE DETAILED ARRANGEMENT OF THE FLOOR THAT CONSISTS OF TWO APARTMENTS THAT ARE CONNECTED WITH PUBLIC BALCONIES.



PLAN OF THE EXPLOITED ROOF SHOWS THE CENTRAL GARDEN AS WELL AS STEP-BY-STEP SEATS FOR VIEWING ACTIVITIES AROUND THE HOUSE.

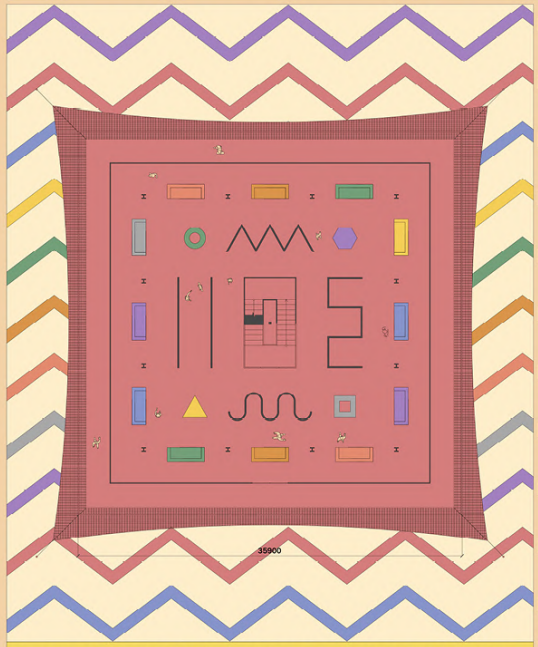


SIDE SECTION REVEALS THE INNER STRUCTURE AND ATMOSPHERE OF THE FLATS, FEATURING BALCONIES WITH SPECTATOR SEATS, AND THE ROOF, WHICH IS EXPLOITED AS A GARDEN.

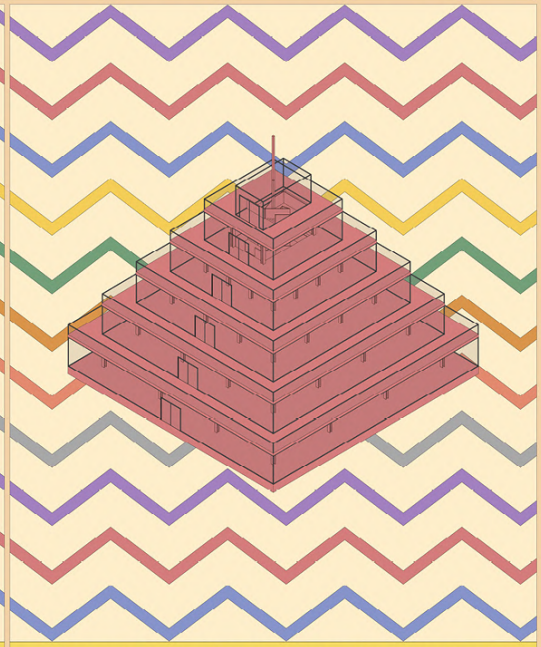
AXONOMETRY OF THE RESIDENTIAL BUILDING WHERE MEMBRANE ROOF, BALCONIES, EXTERNAL STAIRS AND EXPLOITED ROOF ARE SHOWN.

DRAFTINGS AND AN AXONOMETRY OF A RESIDENTIAL BUILDING IN THE THEATER-QUARTER

Technical Drawings Show Various Structural Features Of The Community Center

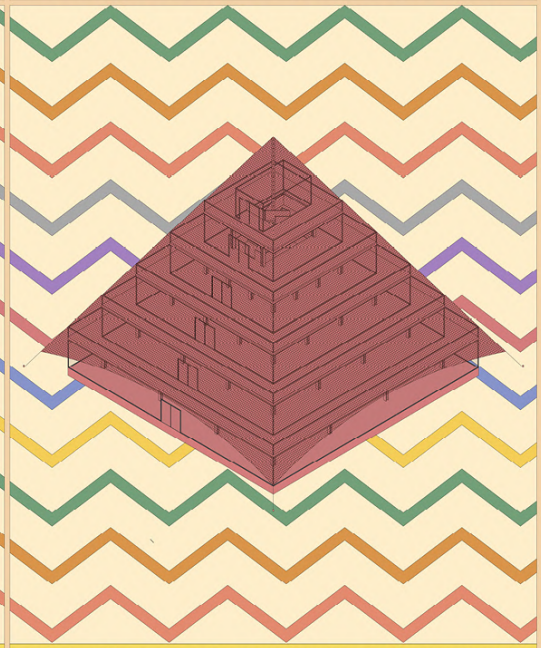


PLAN OF THE COMMUNTY CENTER SHOWS INNER ATMOSPHERE OF THE BUILDING. DIFFERENT SPACES CAN BE USED LIKE EXHIBITIONS OR JUST CHILLING ZONES.



AXONOMETRY OF THE COMMUNITY CENTER SHOWS THAT THERE IS PANORAMIC GLAZING USED LIKE IN APPLE STORES DESIGNED BY NORMAN FOSTER.

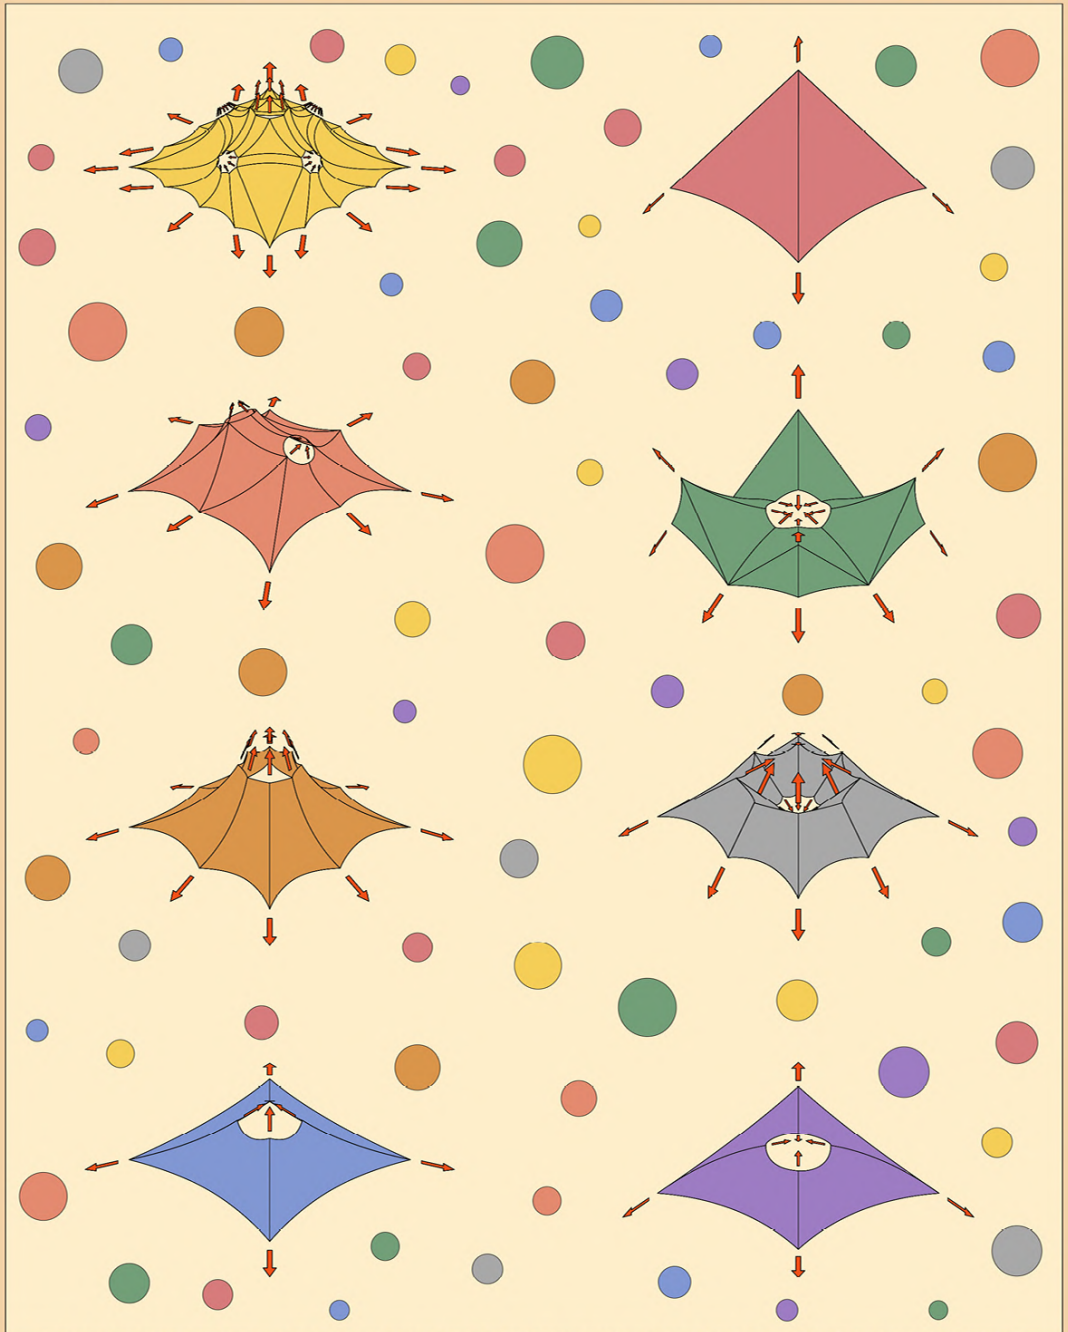
SIDE SECTION SHOWS THAT THE COMMUNITY CENTER IS TRIANGULAR, WHERE AN UPPER FLOOR IS SHORTER THAN A FLOOR BELOW. ALL FLOORS ARE CONNECTED BY A STAIRCASE.



AXONOMETRY OF THE COMMUNITY CENTER REVEALS THAT THE TRIANGULAR GRID CUPOLA MADE FROM STRETCHED ROPES IS SUPERIMPOSED ON THE BUILDING.

DRAFTINGS AND AN AXONOMETRY OF A COMMUNITY CENTER IN THE THEATER-QUARTER

Inspired By The Works Of The Great Engineer Frei Otto



ROOFS OF HOUSES ARE LIGHTWEIGHT AND EFFICIENT STRUCTURES THAT USE FLEXIBLE POLYMER MATERIALS TO CREATE AESTHETICALLY PLEASING AND FUNCTIONAL SPACES

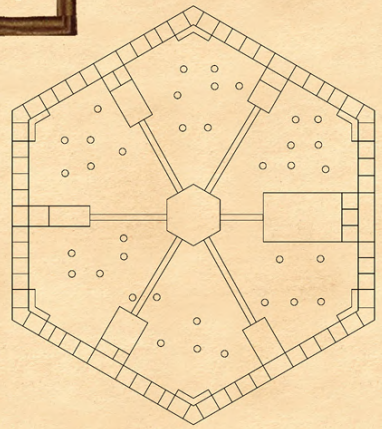
The Wonder School

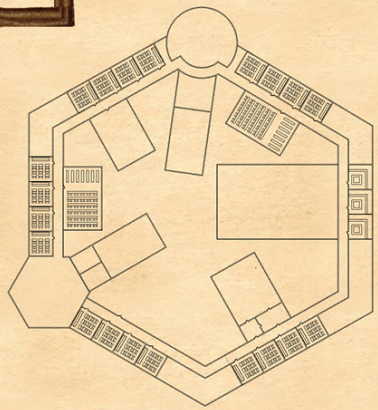
2024 A.D.

I



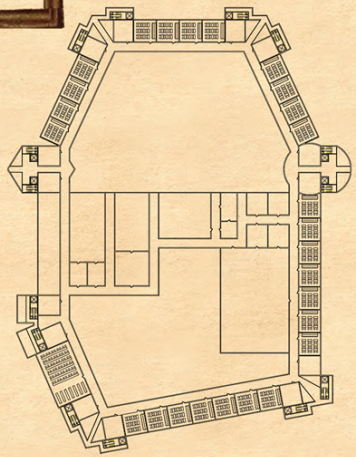
Firstly, concept of the school was created through form finding

II



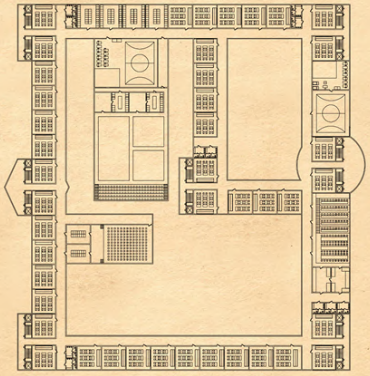
Secondly, new premises appered in the hexagonal school

III



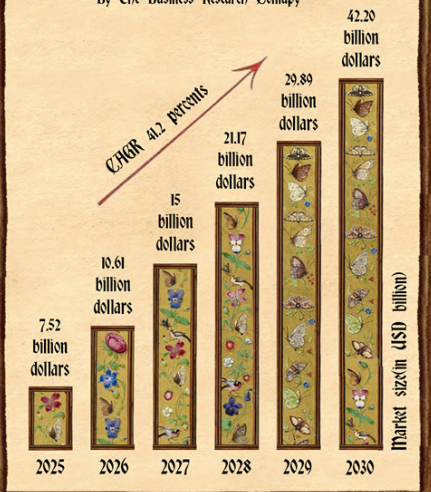
Thirdly, plan was expanded and new functions appeared

IV

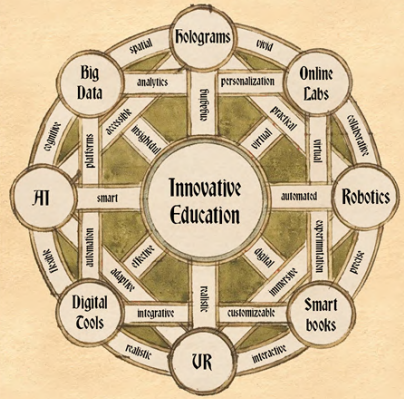


Fourthly, pre-final iteration took the shape of a rectangle

The microchip symbolizes acceleration of knowledge in Wonder School. Set against a dark sky representing the school as a light in the darkness of ignorance, the microchip carries the symbols of the four evangelists, medieval emblems of knowledge, and a dove symbolizing the spirit of learning. At its center is a sun, the core element illuminating and inspiring enlightenment. This innovative design emphasizes the harmonious blend of ancient wisdom and modern technology in the ongoing pursuit of comprehensive education.



Bar chart shows growth of the use of technologies in education



System leads to engaging education

Circular diagram reveals the educational system in the school

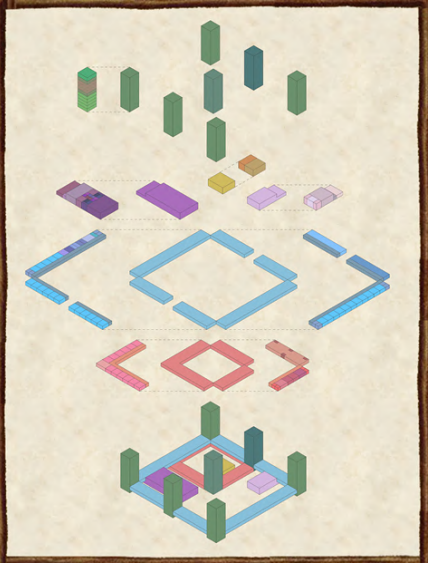
The use of technology and artificial intelligence in education is growing faster every year. In fact, the educational technology market shows an annual growth rate of about 40 percents, which highlights the high demand and importance of digital innovations in learning. Therefore, Wonder School in Chudovo actively implements all modern technical developments, including online platforms, artificial intelligence systems, robots, and other innovative tools. This enables the school to provide a high-quality educational process.

Growth of the use of technology make studying more effective

AI, VR, holograms, robotics, digital tools, smart books, and big data are transforming education by making learning more interactive and personalized. AI customizes lessons to individual needs, while VR and holograms create immersive experiences that help students understand complex subjects better. Robotics offers hands-on practice, and digital tools deliver multimedia content anywhere. Big data helps teachers track progress and improve learning. Together, these technologies modernize education and make it more engaging and effective.

Different kinds of technologies are used to improve education

School project was an academic one completed in a design studio in fall 2024 under the guidance of Olga Sytnik and Elizaveta Cherednichenko. The structure of the Wonder School resembles a unified system, similar to a medieval castle. The school has intriguing passageways and connections linking classrooms and other facilities filled with magic. This mix of fantasy and scholarly tradition creates a deeply immersive and captivating environment that encourages excellence and unlocks each student's potential and creativity.



Exploded diagram reveals division of function in the school

School is located in the small town Chudovo, Novgorod Region

The diagram shows school zones with for various purposes.

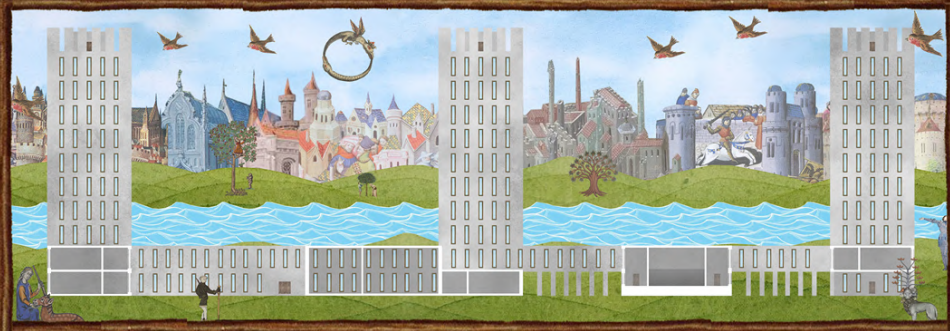
Green zone: Academic dormitory towers with classrooms, lounges, and comfortable dorm rooms for students.
Red zone: Younger students' area with classrooms, after-school care, and rest zones.
Blue zone: Middle and high school classrooms, teacher rooms, and the main dining hall.
Purple zone: Swimming pool and sports hall for middle and high school students.
Yellow zone: Training center for younger students' physical development.
Light pink zone: Main assembly hall for school-wide events and gatherings.

The school is located ina region steeped in medieval history. This area was a prominent center of the Novgorod Republic, known for its democratic traditions, architectural marvels, and flourishing trade across medieval Europe. The school's design, reminiscent of a medieval castle or Hogwarts, reflects this history, symbolizing a place where talented students from around the world gather to learn in an environment that echoes the spirit of the past. This connection to Novgorod's heritage enriches the educational experience by uniting modern innovation with the enduring atmosphere of medieval times, inspiring creativity and excellence in its students.

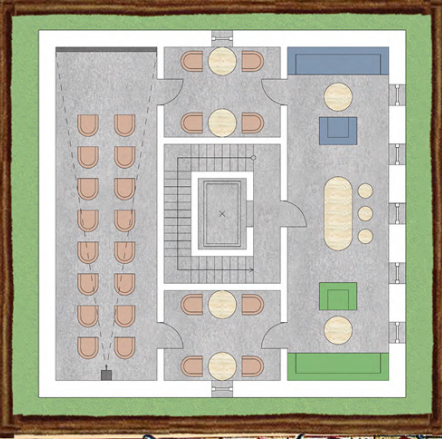
19

Plan of the first floor shows that there are classrooms, two sport centers and park on the territory of the Wonder School in Chudovo, Russia

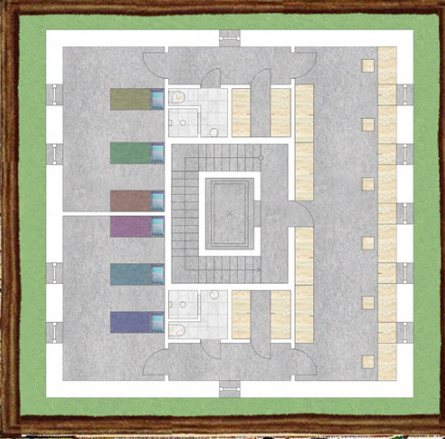
School concept is inspired by Hogwarts, bringing together the most talented students from Russia and the world for top education that opens many academic and career paths. The school's atmosphere resembles a medieval castle filled with magical creatures and landscapes, alongside architectural elements inspired by early universities like Oxford. Integrated modern VR technologies and AI enhance the environment by visualizing various images, making the school fully immerse students in the essence of a medieval castle.



Front section of the school reflects the structure of the building, where there are towers of various faculties and the first two floors with classrooms and park



Plan in the academic dormitory tower features a shared lounge. The space includes a small auditorium, several meeting rooms, and cozy areas with sofas for rest and informal communication. Designed as a place for exchange and collaboration, the lounge allows students of Wonder School to interact with peers from different faculties, fostering creativity, teamwork, and stronger academic performance.



Plan in the dormitory tower is dedicated to residential living. It includes two bedrooms, each with three beds, a kitchen with several tables, and a shower room. At the center of the floor is the core, featuring an elevator and a staircase for easy access. This arrangement is designed to provide Wonder School students with comfortable, functional living spaces that convenience during their studies.

20

The Wonder School is made up of seven towers connected by a perimeter wall. Five towers belong to faculties: Celestial Numbers (math and physics), Cryptography (computer science), Alchemical Transformations (biology and chemistry), Fine Arts (painting, literature, history), and State Wisdom (economics and social studies). The remaining two towers are for younger students and teachers. Each tower has nine floors, which are dedicated to classrooms, lounges, dormitories, and relaxation areas.

Swimming pool gives students an opportunity to sport like knights

Yard of the school is a magic terrotory with various creatures

Assemly hall is a place where schoolchildren stage productions

Dining room is a place for daily feasts with a medival spirit

CONCEPTION

16 RESIDENTIAL BUILDINGS ARE LOCATED IN THE INNOVATIVE DISTRICT AND ARE PART OF A UNIQUE QUARTER RESEMBLING A MICROCIRCUIT. THE QUARTER HAS 12 TWO-STORY BUILDINGS FOR COWORKING, A CONFERENCE HALL, EDUCATIONAL, SPORTS AND LEISURE CENTERS. THE HOUSE HAS 12 FLOORS WITH APARTMENTS OF DIFFERENT TYPES WITH AN EXTERNAL STAIRCASE AND ELEVATOR UNIT FOR CONVENIENCE AND SAFETY. THE STRUCTURE IS MAINLY METAL WITH PANORAMIC GLAZING, CREATING A FEELING OF SPACIOUSNESS. IN THE CENTER OF THE QUARTER IS A PARK WITH A LAYOUT IN THE FORM OF A MICROCIRCUIT AND AN EXHIBITION PAVILION FOR PRESENTATIONS OF INNOVATIONS AND CULTURAL EVENTS. THE COMPLEX COMBINES COMFORT, FUNCTIONALITY AND TECHNOLOGY, REFLECTING THE SPIRIT OF A MODERN CITY.

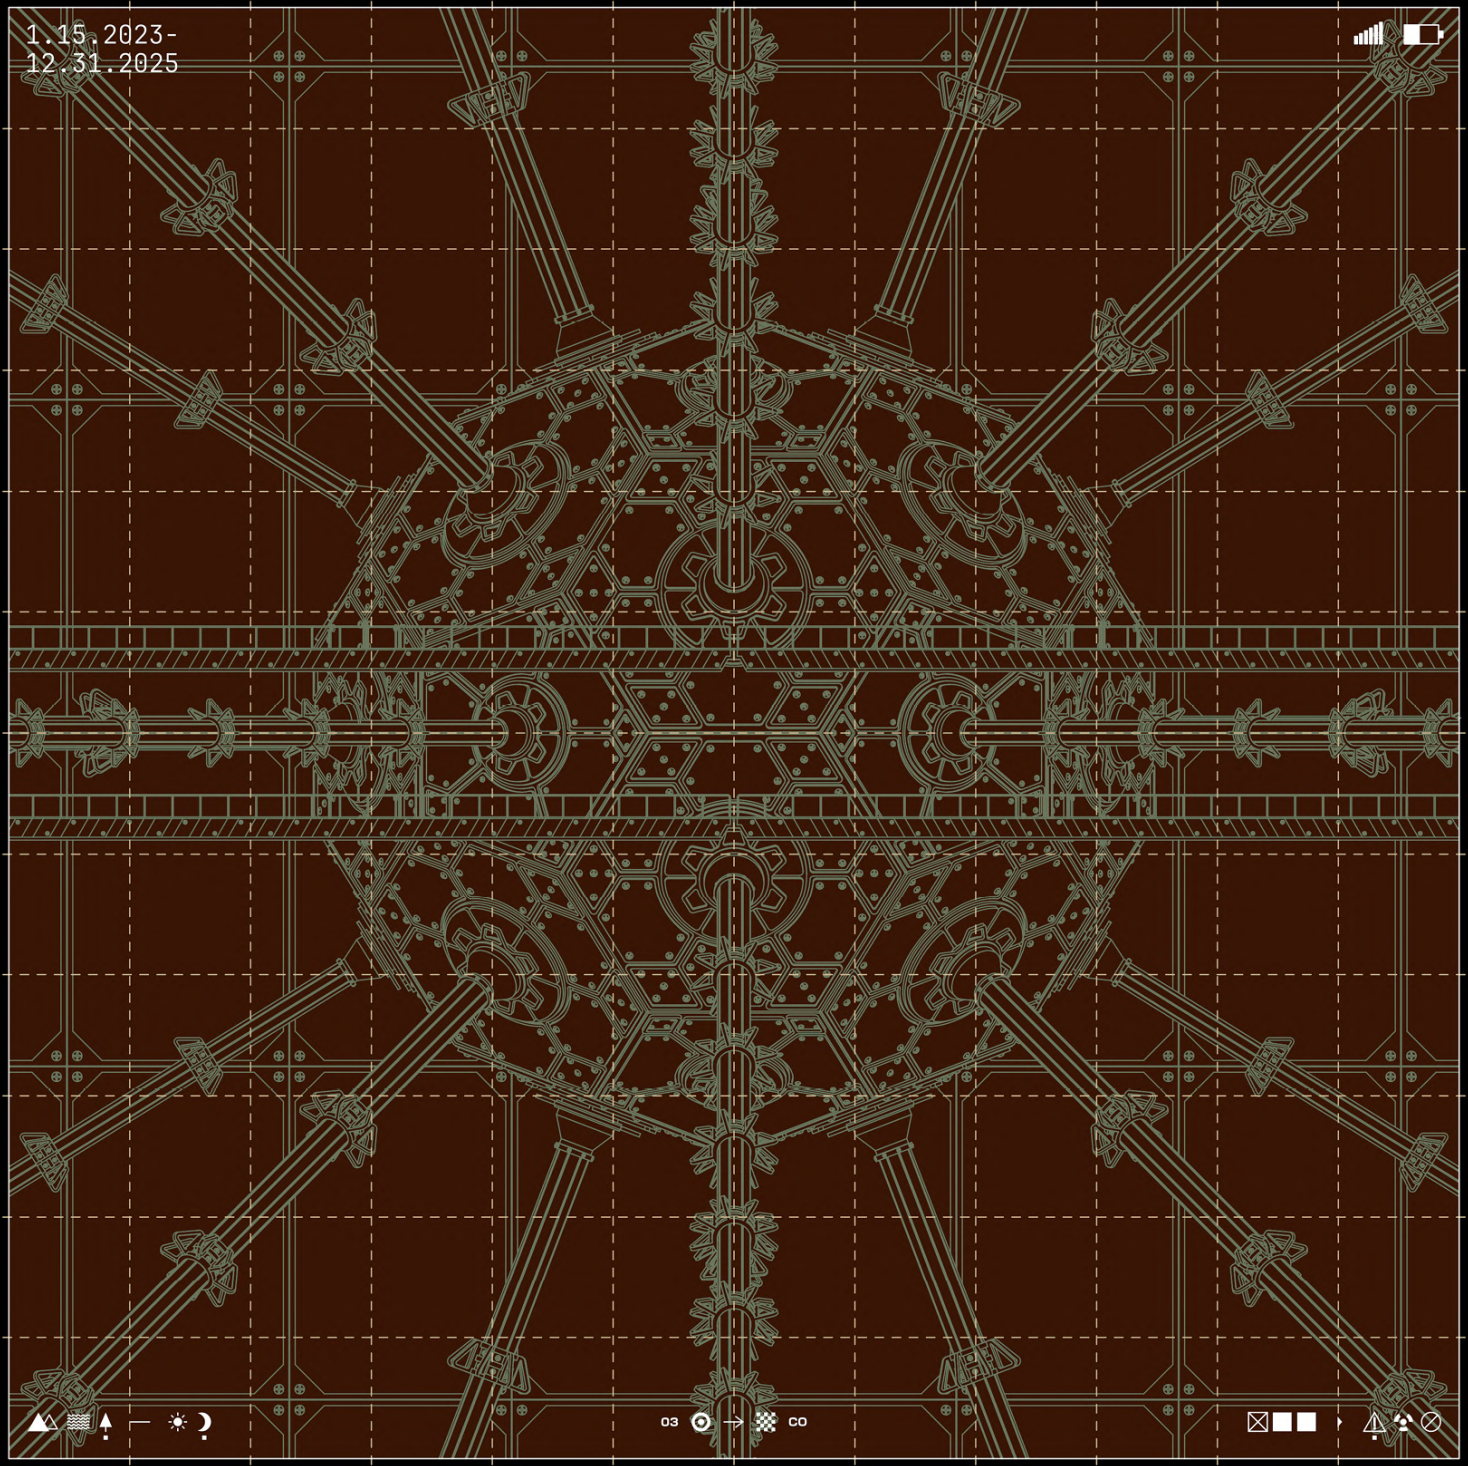
ORBIS
MACHINE

The ORBIS sphere is a personal project of summer 2025 that is a dynamic, multifaceted mechanism creating complex worlds and diverse projects. It embodies the creative mind, merging deep technology with broad vision, insightful strategy, and constant innovation. This sphere symbolizes combining cutting-edge technology and artistic imagination to form meaningful concepts and innovative solutions. ORBIS drives the fusion of logic, creativity, and experimentation, consistently generating results that push traditional design boundaries. It is a living, evolving system embodying modern innovation, interdisciplinary thinking, and collaboration.



創造

ORBIS球体は、複雑で多様な世界やプロジェクトを創造する多面的なメカニズムで、絶えず進化しています。創造的思考と先進技術を融合し、深いビジョンと斬新なアイデアを実現。最先端の技術と芸術的想像力が結びつくことで、意味あるコンセプトや革新的解決策を生み出し、複雑な構造と多様な側面を的確に表現。ORBISは論理性、独創性、実験精神を統合し、伝統的デザインの限界を超える進化的システム。現代イノベーションと多分野協力を体現し、未来志向のビジョンで新たな可能性を切り拓く。独創と技術が交差する場であり、継続的挑戦と成長の象徴として、グローバルな視点から複合的設計と創造の未来を示しています。

過程

World generation is observed through a network of synchronized monitors, each tracking the process in real time. Upon activation, the system issues a warning: CAUTION: New World Generation. All modules enter active mode, orchestrating a precise synchronization of parameters and energy streams across all nodes.

発達

ORBIS

用心

The ORBIS technology is still under experimental development, its core algorithms continuously evolving through autonomous learning cycles. Access is granted only to Institute researchers with Security Level: AAA. All data and internal mechanisms remain strictly classified, concealed behind digital protection systems.
